ANNEX "A"

MAJOR FINAL OUTPUT OF DBP DATA CENTER, INC.

- Empowering Information Technology services to the Development Bank of the Philippines through the following services to the bank: systems development and maintenance and IT operations (database administration, network management, data center operations, and end-user technical support).

Systems Development and Maintenance

- Write, modify, integrate and test computer codes for software applications in various operating and environment/platform, data processing applications, opening and operating systems
- Perform a detailed system investigation and analysis
- Design and implement computer application system
- Apply appropriate techniques in the stages of program development
- Create program documentation
- Test and debug programs
- Perform quality assurance activities
- Manage change requests

IT Operations (Maintenance & Support)

Database Administration

- Plan, design, manage and maintain computer files and information
- Formulate data flows and prepare dataflow diagrams
- Distribute data across a distributed DBMS
- Create/update a relational database using Structured Query Language
- Execute implementation plan according to project timeline
- Define needed external informational resources (e.g., source, content, cost and timeliness)
- Create/maintain a directory of external information resources
- Coordinate security requirements, including documentation functions
- Identify desired levels of access and security
- Calibrate DBMS configuration parameters for optimum performance

Network Management

- Set up computer system, connect users, assess current system, recommend improvements and keep network secure from unwanted and unauthorized users
- Ensure smooth flow of information and protect unauthorized use of information.
- Identify LAN transmission methods and transmission media
- Identify LAN performance factors
- Identify key components of wireless LAN technology
- Identify the TCP/IP applications and services
- Understand and explain basic communication protocols
- Identify appropriate network operating systems
- Install and configure network operating system
- Identify different network classifications and topologies
- Identify the different LAN physical media
- Design WAN systems

IT Operations (Production Support)

End-user Technical support

- Orient users on how to store back-up files and supplies
- Prevent inappropriate and unauthorized use of computer equipment
- Install common computer applications
- Explain to users proper usage of computers and its peripherals
- Provide basic hardware and software troubleshooting
- Identify data communications trends
- Identify major current issues in data communications

Data Center Operations

- Monitors production environment
- Perform batch processing (EOD CASA/ATM, NIDSS, GL)
